Data Structure

Tree
Chapter- 5
Lec- 10

By- Pankaj Sharma sir

TOPICS TO BE COVERED
Tree-X

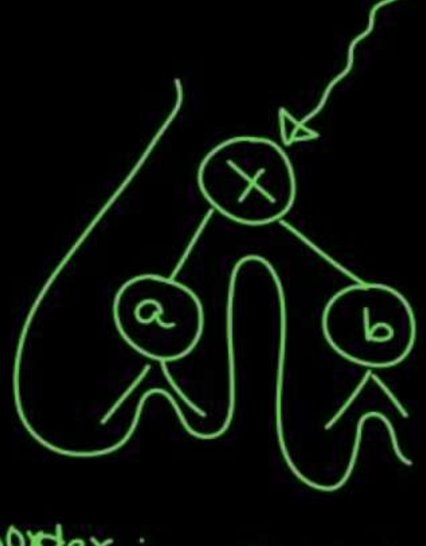
infix : a x b + e/f - g

x /
+ -

Expression tree :

leaf : operands

Internal nodes : operator



$\Rightarrow a \times b$

inorder : a x b

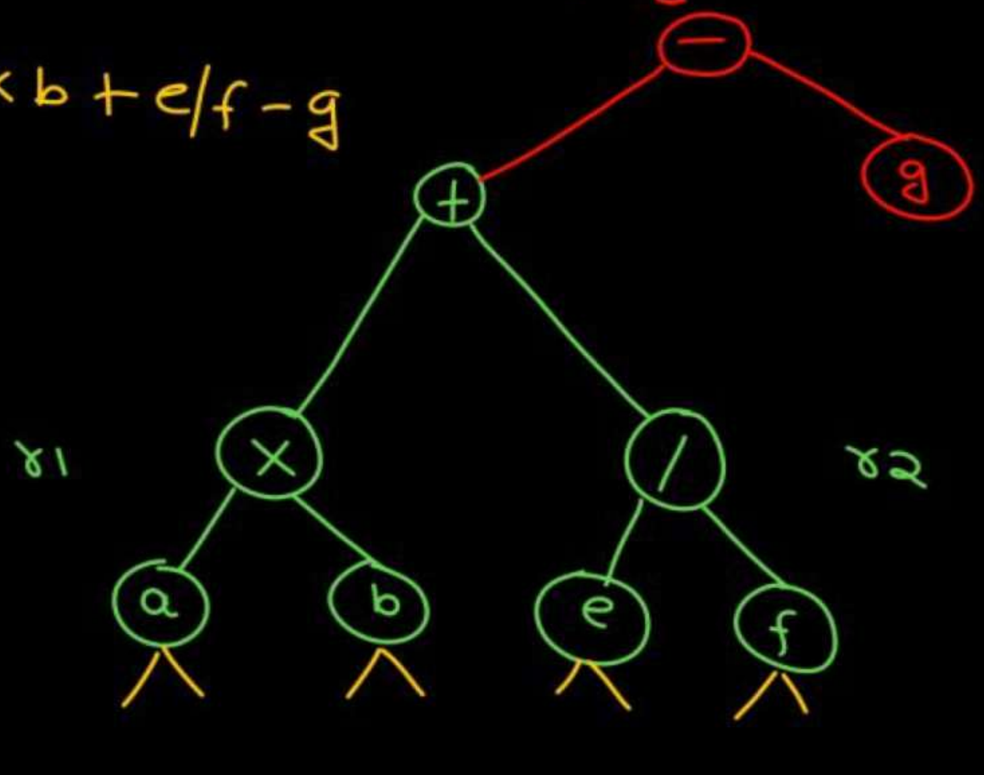
infix : (a x b) + e/f - g

γ1 γ2

γ1 + γ2 - g

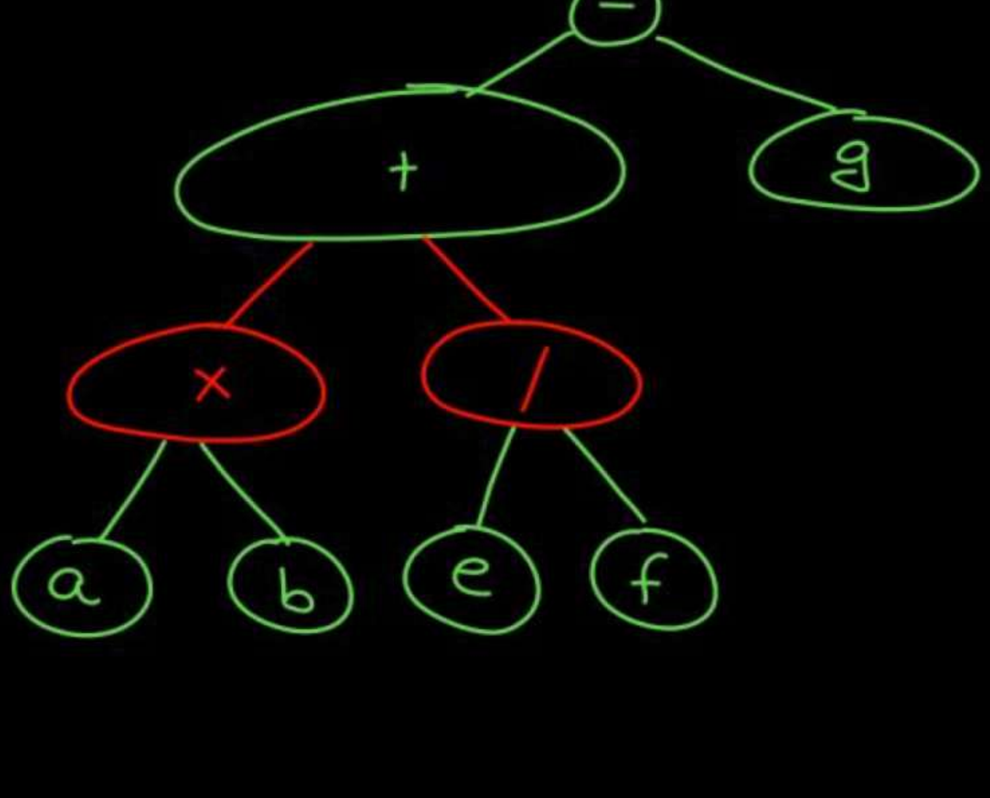
γ - g

inorder : a x b + e/f - g



last

a x b + e / f - g



infix: a x b + e / f - g

Postfix: a b x e f / + g -

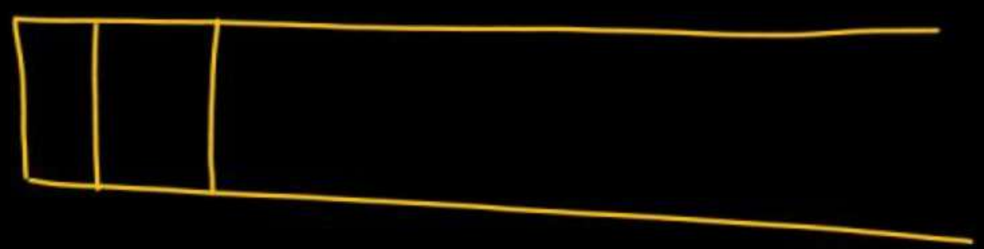
200 Pages x10
= 2000 Pages

✓ infix : 2+3×4

Prefix : +2×34

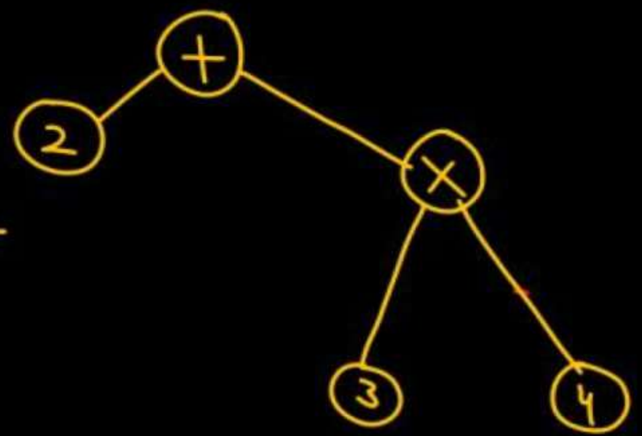
Reverse : 43×2+



inorder : 2+3×4

Preorder : +2×34

Postorder : 234×+

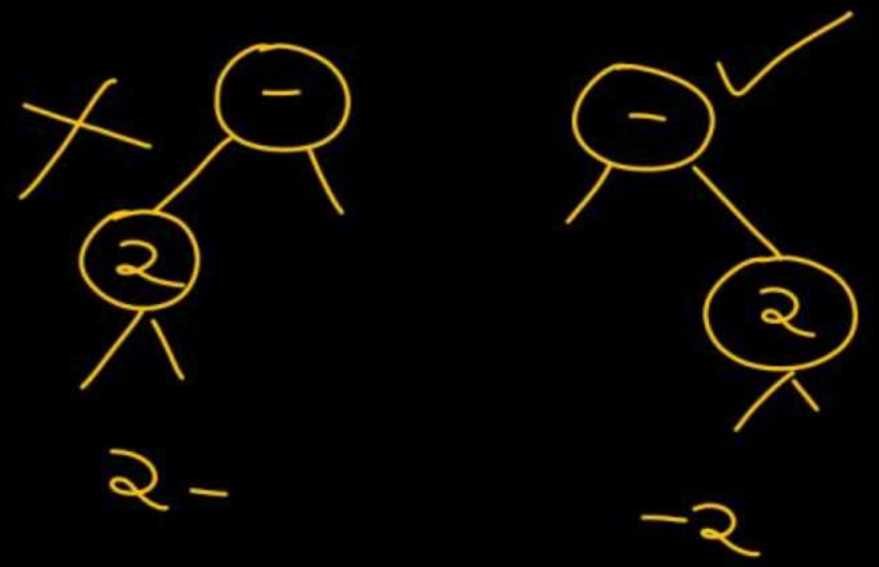


Unary operator

-2

Fail

exp: -2



infix: $3 \times \log(x+1)$

Postfix:

Programming

$$3 \times \log(x+1)$$

(1)

$$3 \times \log([x\,1+])$$

operator, operand

$$3 \times [x\,1+\,\log]$$

op1, op2

Postfix: $3\ x\ 1+\ \log\ x$

Tree

1) Binary tree
2) Complete binary tree
3) k-ary tree : Every internal node ⇒ k child

$$L + I = K \times I + 1$$

$$L = (K-1)I + 1$$

4) Full binary tree
5) $n_{max} = 2^{h+1} - 1$

   $n_{min} = h+1$

6) $n_{max} \Rightarrow 2^{h+1} - 1$ CBT, BT, BST, AVL tree

   $n_{min} \Rightarrow 2^h$ CBT

   $n_{min} \Rightarrow$ AVL

$$n(h) = 1 + n(h-1) + n(h-2)$$

7) BST : Inorder : Asc. order of keys.

8.) # unlabelled binary tree with n nodes $= \frac{2nC_n}{n+1}$

labelled binary tree with n nodes & n distinct keys $= \frac{2nC_n}{n+1} \times n!$

BST with n keys $= \frac{2nC_n}{n+1}$

Given a structure with n nodes & given n distinct keys

BT

BST $\Rightarrow$ 1

q: # Binary tree with a given preorder of length $n = \frac{2nC_n}{n+1}$

" " " Inorder " $= \frac{2nC_n}{n+1}$

" " " Postorder " $= \frac{2nC_n}{n+1}$

Shortcut / long In + Pre ⇒ tree
In + Post ⇒ tree

BST → skewed

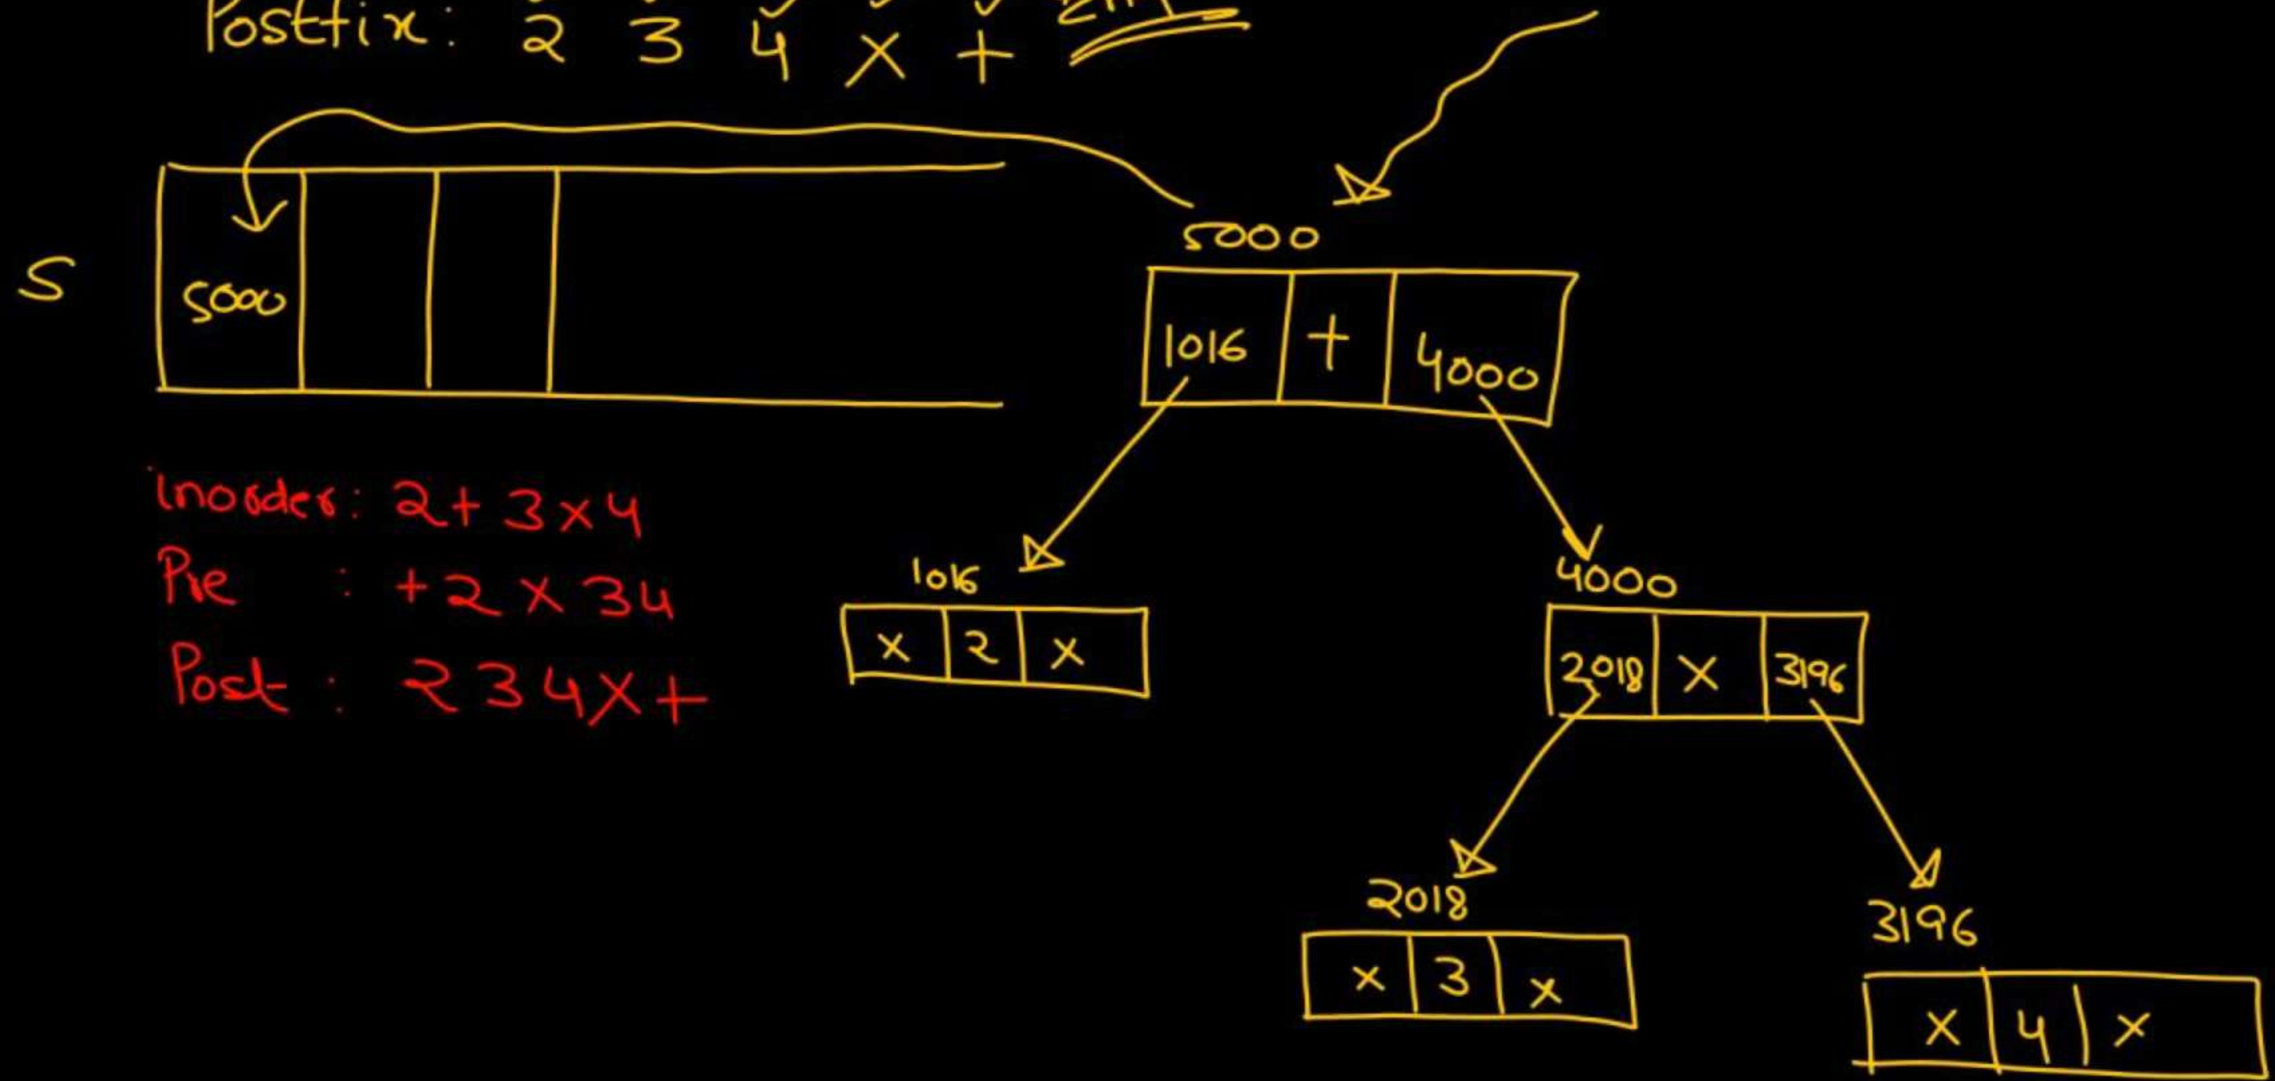
AVL tree

① BST Property

② AVL tree -1, 0, +1

infix : 2 + 3 x 4

Postfix: 2 3 4 x + End



Inorder: 2 + 3 x 4

Pre : + 2 x 3 4

Post : 2 3 4 x +

THANK YOU GW
SOLDIERS !
