## IMPLICANTS AND PRIME IMPLICANTS

i) **Implicants:** The total number of min-terms in the Boolean expression are called Implicants. Or in K-map the total number of 1 is called Implicants.

2> Prime Implicants :- Total number of possibilities of formation of group are called PI.

## IMPLICANTS AND PRIME IMPLICANTS

iii) Essential PI/Selective PI:

iv) **Reduced PI:** The total number of min-terms in the Boolean expression are called Implicants. Or in K-map the total number of 1 is called Implicants.

**Note:** For an  $n$ -variables Boolean function, the maximum, number of prime implicants is  $2^{(n-1)}$ . A group of square or rectangle made up of bunch of adjacent min-terms which is allowed by definition of K-Map are called prime implicants(PI) i.e. all possible groups formed in K-Map.
